

BROADBAND COLLECTIVE ANTENNA AMPLIFIER

Prendeluz S.L.

Precio: **43,45€**

Impedance 75 ?

Otras características

- Alimentación: 230 V
- Audio: 117dB
- Color: Gris
- Frecuencia: 47 a 790 MHz
- Material: Metal-Plástico

Descripción del producto

Broadband amplifier, ideal for small to medium collective antenna installations. Amplifies analogue and digital (DTT) channels, with gain adjustment and slope control. With an input voltage of 230V. It also includes a test connector to check the signal, without the need to disconnect the installation. It has an impedance of 75 Ω , a return loss of >14 dB. The gain is 14 to 34 dB, and the frequency band 47 to 790 MHz. The maximum output level is 117 dB, the noise figure < 6 dB. Adjustment slope 18 dB and output attenuation (test) -30 dB. Made of sturdy metal and plastic, colour grey.
