- Battery type 675 - PR44
- High efficiency and long life
- Zinc air technology

## Otras características

- Color: Azul
- Tipo: 675 - PR44
- Voltaje: 1,45 V

## Descripción del producto

Hearing aid batteries type 675 - PR44. This type of battery is designed for hearing aids, including modern wireless models that are connected by smart devices. They are color-coded for easier detection. Includes 6 units per blister pack. They are long lasting and high efficiency. They are button type and the voltage corresponds to 1.45V. The technology is zinc air so they have a factory seal that will keep them inactive until you start using them. Once activated, the battery will remain in use until its battery is depleted, at which time it should be consciously discarded (not as common garbage) and replaced with a new one. They do not contain mercury and are therefore more environmentally friendly. It is preferable to keep them at a temperature between 10°C and 30°C.
