- Dimensions: 92,5 × 9 × 40 cm

Otras características

- Alimentación: 240 V
- Dimensiones: 92,5 × 9 × 40 cm
- Peso neto: 10,7 kg
- Potencia: 1250 W

Descripción del producto

Electric radiator with low consumption heating system. This 1250 W model is able to cover a surface of up to 25m². These heaters consist of a heating element with a large heat exchange surface and an innovative digital thermostat, in compliance with the European EcoDesign standard. Where is it recommended for installation? in second homes, apartments or offices, places where the heating needs to be reinforced. They do not use forced ventilation so the hot air output is quite natural. It is not noisy. They are easily fixed to the wall following the installation steps or they can be transportable with wheels. Among its benefits we find that: energy can be optimized because of its low consumption, it does not heat oxygen or dust and the warm air it expels is not superimposed only in the upper part of the room.
