## Descripción del producto

Pack of 10 units of mini gutters 10 x 20 mm. Strips of 1 metre long. Its main function is to organize and protect the cables that may be in sight in spaces such as the boot or the corner of the room. For its installation you have to follow 5 simple steps starting with the outline of the cut you want to achieve. Use the appropriate saw for this process, remove and stick the sticker on a clean and dry surface. Insert the cables and finally close the cover. Installation steps: 1) Measure the length of the size to be cut and mark it. 2) Use the junior hacksaw (minimum 50 TPI) at the cut mark. 3) Remove the self-adhesive backing and stick on a clean surface. 4) Insert the cables into the boot. 5) Close the lid by using the effective click lock.
