

# SET OF INJECTED TEST LEADS WITH SAFETY BANANA PLUGS

Prendeluz S.L.

Precio: **9,45€**

Scale is indicated by LED lights

## Otras características

- Alimentación: 6 a 380 V
- Color: Amarillo
- Color: Amarillo
- Dimensiones: 148 x 17 x 26mm
- Led: Sí

## Descripción del producto

Voltage and voltage tester, for various AC/DC voltages of 6, 12, 24, 24, 50, 110, 220 and 380 V. Easy to use, safe, fast and accurate. The indicative scale is shown with red LED lights on the surface of the tester, the reading scale ranges from 6V to 380 volts. When the LED lights up - 6V indicates changed polarity. Perfect for use in poorly lit locations thanks to these LED lights. The meter is yellow, black and red in colour and comes with a clip. It can measure: Resistors, Capacitors, Transistors, Diodes, Switches, etc. Even car batteries thanks to the DC polarity detection function. Simple to use; the black end of the pencil is connected to an earth ground, while the red end is connected to the electrical current to be measured. It searches for faults and determines whether the tested device or cable is properly disconnected from the mains, prior to any manipulation. Rectangular shape, dimensions 148 x 17 x 26mm.
