

# TRANSPARENT NYLON THREAD PASS-THROUGH PROBE - 5 M

Prendeluz S.L.

Precio: **3,95€**

Length 5 m

## Otras características

- Color: Transparente
- Diámetro: 3 mm
- Longitud: 5 metros
- Material: Latón
- Material: Latón

## Descripción del producto

The cable entry grommet - also known as cable entry guide or cable entry probe - allows the installation of all types of cables through conduits. Its adaptability to bends is due to its flexible head that allows for a better fit. It has a spring to improve the search for the hole when passing through. The material is made of brass terminals of maximum hardness. Length: 5 metres with a diameter of 3 mm. The nylon material has an original curved shape and its spiral behaviour is accentuated. By twisting on one side, a slight twisting movement is achieved at the other end. Including standard flexible guide head and standard hooking ring. It is recommended that the mains power supply be disconnected when in use. If necessary, lubricating gel can be used to facilitate the passage of the guide and the cables to be installed through the corrugated tube.
